

Special Effects ET Nozzle

Leafing Aluminum Pigments Made Easy

As technology evolves, more and more automobile manufacturers are embracing special effects pigments, like leafing aluminum, to deliver finishes with shine and brilliance. But what happens when that special finish is damaged?

Because of the specialized application process and atomization control requirements demanded by leafing aluminum coatings, it can seem nearly impossible to confidently color match and repair one of these creative finishes.

With the ANEST IWATA LS-400 Entech and our newly developed line of ET tips, factory quality color match and finish are within reach.

ANEST IWATA makes it possible. Every time.

SPECIAL EFFECTS It's All About the Atomization

- Designed for use in your existing LS-400 Entech
- Special Effects ET nozzles use one universal needle and one universal air cap, eliminating the need for additional conversion spare parts
- Can also be used in extreme humidity environments and for some water base colors

Ordering Information	
ET Nozzle (mm)	Part Number
1.0 ET	93003150
1.1 ET	93003190
1.2 ET	93512150
ET Fluid Needle	93830600
ET Aircap Assembly	93512100
